FRII Gets A Power Boost

FORT COLLINS, CO—FRII, a leading Colorado Internet provider has completed significant upgrades to the power infrastructure of their Fort Collins data center in order to meet increasing demand and maintain their high standards of reliability.

The power boost incorporates two generators- one being Natural gas and housed indoors, and the other being diesel and housed outdoors. To FRII customers, this means FRII redundancy and capacity for growth have increased.

Designed to provide clean and consistent power for modern demanding data center servers and networking equipment, the new system adds another power generation source and increases the available on-site power by five times.

"It is wonderful to see the growth of FRII's customer base turn into an infrastructure build of this magnitude," states FRII's Technical Project Manager, Meghan Laveck who headed up the internal project. The new design continues to completely insulate the data center from abnormalities on the power grid and provides indefinite power in the event of a power loss.

There is benefit here for the general public as well: in addition to the power upgrades, FRII is actively migrating their servers to a VMWare server virtualization cluster. Server virtualization provides a reduction in power consumption while improving the overall reliability of the hosted services they offer. Using less power while providing better performance is something to watch for from FRII in the future. "We are excited to offer businesses an enviro-friendly way to boost security and reduce the cost of doing business," adds FRII CTO, Andy Neely.

FRII's Fort Collins data center is a climate and risk controlled, 24x7 monitored, secure facility that supports colocation, hosting, off-site data archiving and other services using either your own server hardware or FRII's server virtualization platform. FRII remains committed to providing the best in commercial data center services to meet the ever evolving modern business' needs.

###

About FRII

FRII has been providing quality Internet and communication services to businesses and individuals since 1995.

We take pride in our technical expertise and in providing exceptional service to our customers.

We are proudly among the largest Internet service providers in Colorado. We provide custom-tailored Internet solutions using:

• High Speed Broadband • T-1 to OC-12 • Fiber • VoIP • Class-A Data Center • Web Design & Hosting • Dialup • Spam & Virus Filtering • Internet Security • Consulting Services • Data Storage & Backup • Email Archiving.

We are a trusted source for your custom-designed communication structure. We are constantly creating new and intelligent solutions to make your life easier. Voice, Data, Storage - we are your Internet experts.
